Supervisory Patent Examiner, Art Unit 1616

1/24/2011

Continued from Box 11:

Applicants' arguments filed on 01/11/2011 have been fully considered, but they are not persuasive because the claimed invention, which is an agricultural and horticultural water dispersible granule having excellent underwater disintegrability and dispersibility without phytotoxicity, when using an agricultural chemical technical product of which the melting or softening point is 70°C or below (see instant specification: page 3, lines 1-4), has been taught previously by the prior art, namely Misselbrook, J. and Becher et al., combine.

As previously stated in the office action (dated on 11/17/2010), Misselbrook, J. teaches a method of preparing water-dispersible granular compositions comprising low melting pesticidal compounds and swelling clays, wherein these compositions exhibit superior water-dispersibility and disintegration properties than those containing non-swelling clays. The secondary prior art, namely Becher et al., is relied upon to teach N-acylamino acid is a known surfactant which has been used in a herbicidal water-dispersible granule composition to provide desirable effects for the composition. Therefore, one of ordinary skilled in the art would have been motivated to combine Misselbrook, J. with Becher et al. to produce a water-dispersible granular composition, which has superior water-dispersibility and disintegration properties, and may contain N-acylamino acid for additional desirable effects for the composition.

Therefore, the prior rejections of record (dated on 11/17/2010) remain valid and will be maintained for the reasons of record.
